HERMA

Advantages

- Highly flexible servo driven machine for indexing wrap-around labelling of jam capable cylindrical silicone cartridges
- Output up to 50 products per minute
- Construction with in-feed and out-feed belt with specific gentle product handling
- A format adjusted star wheel ensures a smooth product separation, product transport and product fixing during labelling
- Reliable production in stand alone or in line integrated plant with maximum safety for humans and products
- Machine made of stainless steel and anodized aluminium for the chemical industry
- HMI with user-friendly touch screen and intuitive graphical user interface and messages in local language
- High maintainability through the use of components from a large-scale production which guarantees a worldwide availability
- Flexible integration for printers from different manufacturers for the application of variable data on the labels before applying the labels

All rights on any drawings, photocopies, specifications or other material supplied belong to HERMA. This includes copyright patents and trademarks and the right to register same.
Copying/disclosure to any third party is prohibited and any infringement may lead to a claim for remedial damages against the persons to whom the material was supplied.
